SureScan Corporation Appoints VP of International Sales

Endicott, NY – SureScan Corporation today announced the appointment of John Marsala to the position of Vice President of International Sales, a move that strengthens SureScan’s management team during a period of accelerating growth. Effective immediately, Mr. Marsala will report to LeeAnn Levesque, General Manager of SureScan.

With several years experience in international sales for homeland security technology companies, Mr. Marsala brings broad and progressive knowledge of the needs of the industry. He has been successful in sales channel management, business development and driving aggressive corporate growth. Prior to joining SureScan, he held senior sales positions at other new technology, homeland security companies, most notably L3 SafeView, Brijot Imaging and Qylur Security Systems.

In March 2010, the European Union (EU) announced new regulations requiring more stringent security standards in aviation screening of checked baggage that will significantly increase the demand for high speed EDS equipment, like SureScan’s x1000, in the EU and airports around the world over the next 10 years. “I am very pleased that John is joining us as the EU is shifting their security requirements. His industry relationships will be pivotal in launching our product in countries outside of the United States,” stated LeeAnn Levesque.

“As we expand and diversify, we need a world class sales and support infrastructure that will strengthen our focus and favorably position SureScan to capitalize on future growth opportunities,” commented James McNamara, President and CEO of SureScan Corporation. “John’s proven leadership and long history of performance developing

businesses in the explosives detection system market space will help grow our business and strengthen our team. We welcome the breadth and depth of experience and knowledge that John brings to this position,” he continued.

Mr. Marsala holds a B.S. in Engineering from West Point, a M.S. in Organic Chemistry from George Washington University and he was a Captain in the United States Army.

About the x1000

The x1000, a high speed EDS machine, performs computed tomography using a fixed number of stationary sources to determine the density and effective atomic number of objects in checked baggage and cargo. This unique design is not subject to the high rotational forces found in rotating gantry designs, enabling the system to detect explosives while requiring fewer moving parts. This results in enhanced detection capabilities, improved long-term reliability and an overall lower total cost of ownership.

About SureScan

SureScan Corporation is dedicated to bringing advanced technology and total life cycle cost reduction to the homeland security market. SureScan specializes in the development and commercialization of advanced technology solutions. SureScan is headquartered in Endicott, New York.
